## SUMMARY

Dynamic Software Engineer specializing in the intersection of AI/ML, Cybersecurity, and Full-Stack Development. Adept at leveraging Python, Java, and C, alongside Django and deep learning frameworks, to build secure, intelligent, and highly scalable web applications. Master's-level problem solver passionate about deploying cutting-edge technology safely and effectively.

## EDUCATION

|                                                                                                     |                                     |
|-----------------------------------------------------------------------------------------------------|-------------------------------------|
| <b>Rajagiri College of Social Sciences (RCSS)</b><br><i>Master of Computer Applications (MCA)</i>   | Kochi, Kerala<br>2025 – Present     |
| <b>Kristu Jayanti College (KJC)</b><br><i>Bachelor of Computer Applications (BCA)   Distinction</i> | Bengaluru, Karnataka<br>2022 – 2025 |

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, C, SQL

**Web & Frameworks:** Django, Flask, Bootstrap, RESTful APIs

**AI & Deep Learning:** TensorFlow, PyTorch, Keras, OpenCV, NLP

**Libraries & Tools:** NumPy, Pandas, Scikit-learn, Git, Docker, Burp Suite, Nmap, Wireshark

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Cybersecurity Project Intern</b><br><i>National Institute of Electronics &amp; Information Technology (NIELIT)</i>                                                                                                                                                                                                                                                                                                                                                              | June 2022 – Aug 2022<br>Chennai, India |
| <ul style="list-style-type: none"><li>Conducted vulnerability assessments and network traffic analysis utilizing industry-standard tools like <b>Wireshark, Nmap, and Burp Suite</b>.</li><li>Researched secure coding practices and threat mitigation strategies aligned with the <b>OWASP Top 10</b> framework.</li><li>Developed and presented a <b>Web Application Vulnerability Scanner</b> to automate the detection of common web exploits and misconfigurations.</li></ul> |                                        |

## PROJECTS

|                                                                                                                                                                                                                                                    |                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>AI-Powered Web Assistant</b><br><i>Full-Stack Intelligence Application</i>                                                                                                                                                                      | Python, Flask, AI Libraries |
| <ul style="list-style-type: none"><li>Developed a dynamic AI web assistant using Flask for backend routing and API integration.</li><li>Integrated custom Python libraries to handle intelligent user querying and automated responses.</li></ul>  |                             |
| <b>Dynamic E-Commerce Platform</b><br><i>Frontend Web Development</i>                                                                                                                                                                              | Bootstrap, Material Design  |
| <ul style="list-style-type: none"><li>Built a responsive online shopping website focusing on clean UI/UX and cross-browser compatibility.</li><li>Utilized Bootstrap and LocalStorage for dynamic state management across user sessions.</li></ul> |                             |
| <b>Image Captioning System</b><br><i>Deep Learning &amp; Computer Vision</i>                                                                                                                                                                       | Python, TensorFlow, OpenCV  |
| <ul style="list-style-type: none"><li>Developed an end-to-end system for generating descriptive captions for images.</li><li>Utilized CNN and LSTM models for image feature extraction and text generation.</li></ul>                              |                             |
